

## Summary

Honorably discharged after eight year enlistment from the United States Coast Guard. Proven valuable member of maintenance and flight communities primarily on MH-60T and MH-60J aircrafts. Served as an aviation maintenance technician, search and rescue aircrew member, and a precision marksmen aircrew member.

I have been working at a web agency since 2016. I am project lead for our largest client. I am also part of the senior leadership team leading and mentoring our designers and developers.

## Professional Experience

### Trademark 5150 San Diego 2016-Present

Design and develop various client websites. I have led client meetings on team projects and on my own individual projects.

Developed custom hand coded responsive websites within various CMS and E-Commerce platforms such as Wordpress, Drupal and Shopify.

Built a custom Wordpress starter theme and update it on a regular basis for enhancements. Always thinking of how to make it work better for our clients.

Adapt to ever changing workflow of projects, easily able to jump between large website rebuilds to smaller site upgrades for different clients on different web platforms.

Manage and mentor junior developers and interns. I organize sprints for them to complete and train them with theme development.

Presented our custom Wordpress theme as a solution for our client to utilize a CMS in a better way. With their old site they were always having to hire us to do changes. Now the clients sites all use Wordpress with a consistent admin across all sites. The client is now able to make all changes in house saving them thousands per year.

Write detailed documentation for clients on how to use our theme for complex client websites. Put together a design guide for clients designers to use to design future pages that work with blocks in the sites theme.
